

Proposal for addition of bitcoin sign

Ken Shirriff
October 2, 2015

Abstract

The bitcoin sign ₿ is well known and often used in running text, but it is not in Unicode. Adding this sign would be useful for research papers, websites, forums and other publications. There is substantial demand for ₿ to be added to Unicode, the user community supports adding the sign to Unicode and its addition would fill a significant gap in Unicode's currency symbols. This proposal has the support of the Bitcoin Foundation as well as other Bitcoin organizations, companies and developers.

Introduction

Bitcoin is a popular open-source payment system and the bitcoin sign ₿ is used to represent the underlying currency in running text and images. [1] The bitcoin sign ₿ is well known to the public, appearing in books, magazines, signage, websites, online forums, software and research papers. Unfortunately the bitcoin sign does not appear in Unicode.

This proposal is for a Unicode code point for the bitcoin sign to be added to Unicode. This would make it much easier to use the bitcoin sign in text and would fill the substantial demand for this character.

Examples of the bitcoin sign in running text

This section gives examples of the use of the bitcoin sign in running text from a variety of sources, printed and web-based.

A screenshot of a Wikipedia page on Bitcoin. The text reads: "As of 2014, symbols used to represent bitcoin are BTC,^[note 2] XBT,^[note 3] and ₿.^[note 4]^{[36]:1}" The bitcoin sign ₿ is clearly visible in the text.

As of 2014, symbols used to represent bitcoin are BTC,^[note 2] XBT,^[note 3] and ₿.^[note 4]^{[36]:1}

Figure 1. Wikipedia page on Bitcoin showing bitcoin sign in running text. [2]

1 Standard practice is to use capitalized “Bitcoin” when referring to the protocol, software and community, and lowercase “bitcoin” when referring to the currency.

Drawing the glyph

The bitcoin sign glyph is most commonly drawn as shown:

It is described as “a capital letter **B** with two vertical lines 'going through' it, though the lines are only visible at the top and bottom.” [38]

There are variants of the bitcoin sign glyph with different serifs, no serifs, different line weights, or the verticals slightly moved. These can all be handled as variations in different fonts.

The public-domain [BTC.ttf](#) font contains the bitcoin sign. This font is used in this proposal and can be used as the reference for the bitcoin sign. An open-source web font with the bitcoin sign ([fa-btc](#) by Font Awesome) is also available. The bitcoin sign is one of the currency [glyphs](#) provided with the popular Bootstrap web framework.

User community demand for the symbol

The Bitcoin user community strongly supports the addition of the bitcoin sign to Unicode. A discussion about adding the bitcoin sign on the Reddit Bitcoin group (which has over 172,000 readers) was highly favorable. [39] The current proposal was also discussed on the popular digital currency forum [bitcointalk.org](#) and the Bitcoin developer forum [bitcoin-dev](#) which were supportive.

The [bitcointalk.org](#) forum illustrates the popularity of the bitcoin sign in running text: there are over 120,000 text postings in this forum that use the bitcoin sign. [40] This website uses a custom font and special coding that allows users to easily insert the bitcoin sign into text. If the bitcoin sign were added to Unicode, it would be available to users on any forum, not just ones with specialized software.

Reddit moderators attempted to add bitcoin sign support to the Bitcoin forum due to demand for this feature, but were unsuccessful for technical reasons. [41] Unicode support would make this straightforward.

https://www.reddit.com/r/Bitcoin/comments/3jmg9h/proposal_to_add_the_bitcoin_symbol_to_unicode_pdf/

40 A database query by [bitcointalk.org](#) administrator *theymos* returned 120,842 messages containing the Bitcoin sign, as of 30 Aug 2015.

41 Proposal for adding Bitcoin symbol in this subreddit:
https://www.reddit.com/r/Bitcoin/comments/3j385n/proposal_for_adding_bitcoin_symbol_in_this/

In 2014, the Bitcoin Foundation looked into standardizing a Unicode symbol for Bitcoin. [42] The Bitcoin Foundation supports the current proposal.

Users of the LaTeX document preparation system have asked in several forums how to use a bitcoin sign in LaTeX [43]; this problem would go away if the symbol were in Unicode.

User community support

The Bitcoin user community strongly supports the addition of the bitcoin sign to Unicode. Discussions about adding the bitcoin sign on the Reddit Bitcoin group (which has over 172,000 readers) were highly favorable. [44] The current proposal was also discussed on the popular digital currency forum bitcointalk.org and the Bitcoin developer forum bitcoin-dev which were supportive.

This proposal is supported by the Bitcoin Foundation, the leading nonprofit organization for the Bitcoin community. Other supporters of this proposal include [21](#) (Bitcoin startup), [Bitcoin Solutions Ltd](#), Andreas Schildbach ([Bitcoin Wallet](#) author), [Digitalcoin Foundation](#), [BitNewsFlash](#), Eric Martindale (former Open Source Strategist at Bitpay), [Bitcoin Wales](#), Justin Drake (founder of [Cambridge Bitcoin](#)), theymos (head administrator of bitcoin.org and [/r/bitcoin](http://r/bitcoin)), Theo Chino (Bitcoin developer) and Peter Todd (Bitcoin Core developer).

Properties

The proposed properties for the bitcoin sign are:

20BF;BITCOIN SIGN;Sc;0;ET;;;;N;;;;

Name: The name BITCOIN SIGN is suggested. The name parallels EURO SIGN, PESO SIGN, RUBLE SIGN, etc. This name follows the Designation/Qualifier structure of ISO/IEC 10646:2014 Annex L Guideline 4.

Range: Currency Symbols (20A0–20CF), with proposed code point 20BF – the next available code point in the range. The bitcoin sign is suitable for the Basic Monolingual Plane (BMP); it is high utility due to the size of the community and their heavy use of the symbol. A code point in the Supplemental Multilingual Plane (SMP) is not recommended because the bitcoin sign will be used by a variety of mobile devices and apps, with variable levels of support for SMP characters.

Table 1: Suggested character properties for bitcoin sign.

The bitcoin sign is uncased and has no special line-breaking behavior. The character is not meant for use in identifiers. It is a standalone symbol. It is not a white-space character and has no numeric value. It is not a combining character or punctuation.

Potential issues

Can an existing Unicode symbol be used?

The [Bitcoin Wiki](#) says that “By far the most commonly used symbol for Bitcoin is **₿**” and it discusses various alternatives. One possibility is LATIN CAPITAL LETTER B + COMBINING DOUBLE VERTICAL STROKE OVERLAY. This has several problems. Semantically, the bitcoin sign is not a B combined with vertical strokes, but a unique character unrelated to B. Visually, the bitcoin sign is very different from a B with vertical strokes, since the bitcoin sign only has strokes at the top and bottom. Finally, depending on the browser and font, rendering of the combined B ranges from unreadable to ugly.

Figure 26. “B combined with double vertical stroke overlay” as rendered in current versions of Windows Chrome, Android, Internet Explorer, Firefox, Linux Chrome, and Mac Safari.

Another alternative is **฿** THAI CURRENCY SYMBOL BAHT. Unlike single-bar and double-bar dollar signs. [45], the bitcoin sign and baht symbol are not variants of one symbol. The bitcoin sign and baht symbol are two historically unrelated symbols. The bitcoin sign uses two bars, while the Baht symbol uses one. The bar is visible through the Baht symbol while the bars are not visible through the bitcoin sign. Since one glyph will not be satisfactory for the bitcoin sign and baht symbol, these are not candidates for unification. [46]

Some websites use the baht symbol to represent bitcoins due to the lack of the bitcoin sign in Unicode. However, this is considered by some to be “hijacking” and “stealing” the baht symbol. [47][48] While the same symbol can be used for two currencies (e.g. \$ for US dollars and Mexican pesos), there is no reason to reuse the baht symbol for bitcoin except the lack of the bitcoin sign in Unicode.

Another alternative is **ℬ** LATIN CAPITAL LETTER B WITH STROKE. This is supported by some people because it is an existing Unicode character. [49] However, it does not resemble the bitcoin sign, so it would require a major effort to switch to it.

These alternatives are workarounds due to the lack of the real bitcoin sign in Unicode. If the bitcoin sign were in Unicode, these alternatives would not be used.

Is the bitcoin sign a commercial logo?

To quote from bitcoin.org: “Bitcoin is open-source; its design is public, nobody owns or controls Bitcoin.” The bitcoin sign was originally part of an icon created for the Bitcoin client software in 2010 by Bitcoin inventor “Satoshi Nakamoto” and placed into the public domain. [50] The bitcoin sign was

45 Relevant discussion in Unicode Standard Version 8.0 – Core Specification, 22.1 Currency Symbols.

<http://www.unicode.org/versions/Unicode8.0.0/ch22.pdf>

46 Use of the baht symbol for Bitcoin was discussed on the unicode.org mailing list in the thread “Upcoming proposal for Bitcoin sign”. That thread should be referenced for more information on why the two symbols should not be unified. <http://unicode.org/pipermail/unicode/2015-September/002683.html>

47 Some Bitcoin enthusiasts want to hijack the symbol for Thailand’s currency, Tech in Asia. <https://www.techinasia.com/bitcoin-enthusiasts-steal-symbol-thailands-currency/>

50 Announcement of icon, 24 Feb 2010: <https://bitcointalk.org/index.php?topic=64.0>

Icon with public domain license: <https://en.wikipedia.org/wiki/File:Bitcoin.png#filehistory>

Icon was placed in source code (replacing the “BC” icon) 20 Jun 2010:

later extracted from the icon for use in text, and the resulting font was also placed in the public domain. The bitcoin sign is a common component of Bitcoin logos, but the symbol itself is a text character, not a logo.

Previous bitcoin sign proposal

The bitcoin sign was previously proposed for addition to Unicode in [L2/11-130](#) and [rejected](#). The first issue was the use of the bitcoin sign in running text had not been demonstrated. The current proposal demonstrates many uses in running text. The other issue that was raised was the possibility of IP issues because the community website bitcoin.org is using the symbol in their logo. According to bitcoin.org, the logo is in the public domain. [51] Also note that this proposal discusses the symbol, not the logo.

Will Unicode be flooded with symbols for many crypto-currencies?

Most other crypto-currencies have learned from the difficulty that a non-Unicode symbol causes for Bitcoin, and use a symbol already in Unicode. For instance, Dogecoin uses Ð, Ethereum uses Ξ, Litecoin uses Ł, Namecoin uses ₪, Peercoin uses ₪ and Primecoin uses Ψ. Some, like Ripple, use Roman capital letters (XRP), mimicking ISO 4217 currency codes.

While it is possible another crypto-currency will have a non-Unicode symbol that is extensively used in text, this is unlikely.

Is Bitcoin just a transient fad?

Bitcoin was created in 2008 and its use has grown exponentially since. CBS reported 1.3 million Bitcoin users in 2014. [52] It seems unlikely that Bitcoin will suddenly disappear. If it does, the bitcoin sign will still be useful for historical writing and research papers about currencies.

<https://en.wikipedia.org/wiki/File:Bitcoin.png#filehistory>

51 Logo was created by bitboy and placed in public domain: <https://bitcointalk.org/?topic=1756.0>

52 Report: Nearly 5 million Bitcoin users by 2019, CBS Moneywatch, March 17, 2015.
<http://www.cbsnews.com/news/report-nearly-5-million-bitcoin-users-by-2019/>

Conclusion

Looking at the Unicode [Criteria for Encoding Symbols](#), the bitcoin sign ₿ is a good fit for addition to Unicode. It occurs in running text. It has a well defined user community. Being able to search for it in text would be useful. It has well-defined semantics that make it appropriate for computer processing. It is needed to complete the class of currency symbols already in the standard. [53] Finally, it is letter-like in the sense that it should match the surrounding font style.

The bitcoin sign is used extensively in running text in online forums, research papers, websites and other publications. There is a strong demand for this character and the lack of Unicode support requires inconvenient workarounds. Providing the bitcoin sign in Unicode would be highly beneficial.

Acknowledgments: Many people provided helpful comments including Garry Clawson, Mark Davis, Justin Drake, Martin Dürst, Asmus Freytag, jstolfi, luke-jr, molo1134, NLNico, QuasiSteve, runpaint, Marcel Schneider, theymos, Danny Thorpe and Richard Wordingham.

53 All presently-circulating currency symbols (as defined by Wikipedia) are represented in Unicode with the exception of the Bitcoin sign and the Pridnestrovie ruble.

https://en.wikipedia.org/wiki/Currency_symbol#List_of_presently-circulating_currency_symbols

3. Proposed category (select one from below - see section 2.2 of P&P document):	
A-Contemporary <input checked="" type="checkbox"/>	B.1-Specialized (small collection) <input type="checkbox"/>
B.2-Specialized (large collection) <input type="checkbox"/>	C-Major extinct <input type="checkbox"/>
D-Attested extinct <input type="checkbox"/>	E-Minor extinct <input type="checkbox"/>
F-Archaic Hieroglyphic or Ideographic <input type="checkbox"/>	G-Obscure or questionable usage symbols <input type="checkbox"/>
4. Is a repertoire including character names provided?	<input checked="" type="checkbox"/> Yes
a. If YES, are the names in accordance with the “character naming guidelines” in Annex L of P&P document?	<input checked="" type="checkbox"/> Yes
b. Are the character shapes attached in a legible form suitable for review?	<input checked="" type="checkbox"/> Yes
5. Fonts related:	
a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard?	<input type="text" value="See text"/>
b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.):	<input type="text" value="public domain font"/>
6. References:	
a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?	<input checked="" type="checkbox"/> Yes
b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?	<input checked="" type="checkbox"/> Yes
7. Special encoding issues:	
Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?	<input checked="" type="checkbox"/> Yes
	<i>see text</i>

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database (<http://www.unicode.org/reports/tr44/>) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

¹ Form number: N4502-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11, 2011-03, 2012-01)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain	<i>No</i>
	<i>L2/11-130 is an earlier proposal for the same character.</i>
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? If YES, with whom? If YES, available relevant documents:	<i>Yes</i>
	<i>see text</i>
	<i>see text</i>
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Reference:	<i>Yes</i>
	<i>see text</i>
4. The context of use for the proposed characters (type of use; common or rare) Reference:	<i>common</i>
	<i>see text</i>
5. Are the proposed characters in current use by the user community? If YES, where? Reference:	<i>Yes</i>
	<i>see text</i>
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? If YES, is a rationale provided? If YES, reference:	<i>Yes</i>
	<i>Yes</i>
	<i>see text</i>
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?	<i>n/a</i>
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to, or could be confused with, an existing character? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided? If YES, reference: Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:	<i>No</i>
	<i>n/a</i>
12. Does the proposal contain characters with any special properties such as control function or similar semantics? If YES, describe in detail (include attachment if necessary)	<i>No</i>
13. Does the proposal contain any Ideographic compatibility characters? If YES, are the equivalent corresponding unified ideographic characters identified? If YES, reference:	<i>No</i>
